

# greencorp climate change

Calculation of, and action towards, GHG emissions and Climate Change Impact are quickly growing essential services to respond to global economic and social concerns.

The catastrophic consequences of global warming are increasingly evident and there is now an overwhelming consensus amongst climate scientists on anthropogenic climate change. The increasingly tangible effects of climate change on companies' operations raise concern over economic and social vulnerability. In order to remain viable, businesses need to act now to reduce risk and find competitive advantage in this warming, carbon-constrained world.

Don't let extreme weather events; supply shortages due to water scarcity; increasing business costs due to changing markets, technology and regulation; or escalating liability for emitting GHG take your business by surprise. With Greencorp, you will understand, analyse and better strategize your business towards climate change resilience and ongoing success.

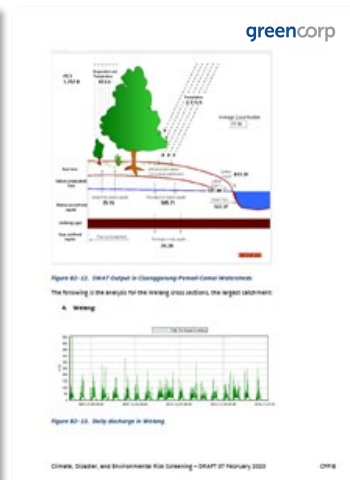

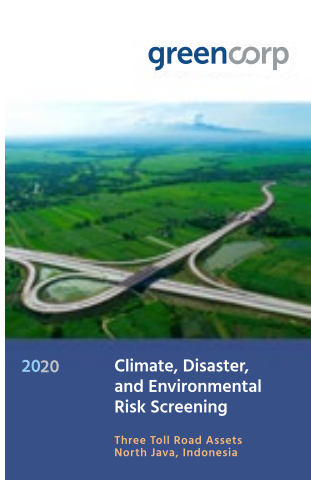

## Strategy

- GHG reduction strategy
- Climate Change Modelling and Risk Assessment

## Reporting

- GHG inventory for Sustainability reports

## Services

- Development of GHG accounting tools
- Completion of GHG inventory
- Development of GHG reduction strategy
- Climate Change Impact Modelling
- Climate Change Risk Assessment and Mitigation

## Project Experience

- Confidential Client – Three Toll Road Assets: Climate, Disaster, and Environmental Risk
