

# greencorptraining

Our courses aim to provide HSE professionals with a good understanding of the underpinnings of sustainable development and how this concept is viewed in industrial operations.

**greencorp** training places strong emphasis on the need to encourage active involvement of participants, whatever the technical content. Our experienced facilitators use Accelerated Learning techniques to ensure participants are fully engaged in every session. This includes the use of Socratic questioning to create and hold discussion and active listening to ensure all participants are engaged and heard.

All of our training courses use a blend of speaking, written content, posters and images, video and activities involving group discussion, games and physical engagement. This ensures you're your participants leave having learned what they need to know and having had fun in the process. Training can be tailored to your specific needs or can be selected from our syllabus of courses.

**Training for Professionals by Professionals**

Environmental Aspects of Mining, Indonesian Mining Professionals Government, Bali, 2012
